“The Systems Engineering Method - An Introduction to Model Driven Systems Development”

This seminar provides an overview of Systems Engineering as applied in today's industrial and government environments. It covers the basic Systems Engineering disciplines, the state of career opportunities, some challenges encountered when using classical Systems Engineering approaches to develop large-scale complex systems, and concludes by discussing Model Driven Systems Development, a new methodology to address some of these challenges.

Tuesday, April 22, 2008

1:30 – 2:20 p.m.

101 Loew Hall
